## SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

### 8.1. Control parameters

Contains no substances with occupational exposure limit values.

### 8.2. Exposure controls

#### Personal protective equipment

##### Respiratory protection

Use only in well ventilated areas. In case a risk analysis has proven that the cartridge respirator is acceptable, use the type:

ABEK-P3 (EN 14387) cartridge respirators as a backup to engineering controls

In the absence of engineering controls, use self-contained breathing apparatus or full facepiece respirators. Use respirators and components tested and approved to appropriate government standards such as CEN (EU).

##### Hand protection

Use gloves when handling substances in open systems. Inspect gloves prior to use. Train operators for proper use.

If accidental exposure is expected : (work without direct contact to substance) use gloves tested according to EN 16523-1, 1 breakthrough times at least 10 minutes, tested for the chemicals listed in chapter 3 of this SDS. Change gloves frequently.

If direct skin contact is expected: use gloves tested according to EN 16523-1, tested for the chemicals listed in chapter 3 of this SDS. Permeation time must exceed contact time.

##### Eye protection

Use safety glasses and faceshield tested according to EN 166.

##### Skin and body protection

Wear working clothes covering arms and legs. The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace. Use apron or complete chemical suit if exposure is expected.

## Hygiene measures and general protective measures

Do not eat, drink or smoke during work. Wash and dry your hands after finishing work.

Exposure assessment : exposure is dependent on the product being handled, the potential for chemical release and any resulting airborne concentrations or dermal contact. As handling and release scenarios vary and differ from one workplace to another, it is recommended that the potential for exposure be assessed prior to the product's use or introduction. Exposure assessments should be performed by an occupational hygienist or industrial hygienist or other qualified occupational or environmental health professional. An exposure assessment should be conducted to determine the effectiveness of any ventilation and the need for additional respiratory protection. PPE is always the last resort to avoid exposure. In any case, technical and organisational measures have to be explored and used before PPE is selected. The PPE selection is for operators trained to work with chemicals according to good industrial hygiene and safety practice. Operators have to be trained and used to PPE handling.

Prevent product from entering drains.

If the product contaminates rivers and lakes or drains, inform the respective authorities.
